

How football danger forms before it becomes visible.

A media and academy-oriented event-chain risk report based on the Synathra.Sport v0.5 public validation release.

EXECUTIVE SUMMARY

Synathra.Sport is an explanation layer, not another xG model.

Synathra.Sport v0.5 is best read as an explainable event-chain risk layer for football event streams. It ranks and explains short event contexts that can precede visible danger such as shots, high-xG shots, and goals. The report is designed for media and academy use: readable enough for football storytelling, structured enough for coach education.

Boundary of the claim

This report does not claim final-score prediction, bookmaker pricing, or universal tactical recommendation. It demonstrates event-risk ranking and explanation transfer across tested football domains.

VALIDATION SNAPSHOT

Frozen score validated across five football groups.

The v0.5 evidence tests whether frozen **hybrid_score_v0_1** transfers from the original men's international validation contour into club football and women's international football without local reweighting.

Synathra.Sport v0.5 validation snapshot

Frozen hybrid_score_v0_1 across five football validation groups

Decision: PASS_V0_5_DOMAIN_TRANSFER | all-groups mean lift: 4.79x | new-domain min lift: 4.68x

GROUP KEY	DOMAIN SHIFT TYPE	TARGET ROLE	MATCHES	ROWS	POSITIVES	BASE RATE	TOP10 RATE	TOP10 LIFT	ROC AUC
FIFA World Cup 2018	same_family_cross_season	v0_4	20	71838	590	0.82%	3.84%	4.68x	0.742
FIFA World Cup 2022	same_family_cross_season	v0_4	64	234637	1808	0.77%	3.84%	4.98x	0.748
UEFA Euro 2024	cross_competition_base	v0_4 International	51	187924	1140	0.61%	2.89%	4.76x	0.756
Ligue 1 2021/2022	club_transfer	v0_5_candidate	26	101766	810	0.80%	3.72%	4.68x	0.734
Women's World Cup 2023	gender_transfer	v0_5_candidate	64	226118	1664	0.74%	3.56%	4.84x	0.729

FROZEN FORMULA

The score combines event risk with chain context.

```
hybrid_score_v0_1_raw =  
  0.50 * event_risk_calibrated  
+ 0.05 * inside_hardened_chain  
+ 0.10 * chain_delta_context  
+ 0.35 * subtype_reliability
```

```
hybrid_score_v0_1 = normalized deployment score  
in [0, 1]
```

INTEGRITY CHECK

Formula and score range checks passed.

GROUP KEY	RAW FORMULA OK	NORMALIZED SCORE RANGE OK
FIFA World Cup 2018	True	True
FIFA World Cup 2022	True	True
UEFA Euro 2024	True	True
Ligue 1 2021/2022	True	True
Women's World Cup 2023	True	True

DOMAIN-TRANSFER SCHEMA

From base contour to product-facing transfer domains.

Domain-transfer validation logic

Frozen event-chain score tested across football domains without local reweighting.

Base contour

World Cup 2018
World Cup 2022
UEFA Euro 2024

Frozen score

hybrid_score_v0_1
event risk + chain context
subtype reliability

Club transfer

Ligue 1 2021/2022
no local reweighting

Gender transfer

Women's World Cup 2023
no local reweighting

Release decision: PASS_V0_5_DOMAIN_TRANSFER | 5 validation groups | 2 new transfer domains | normalized score in |

DEMONSTRATION CHAINS

Five media-readable and coach-readable chain cards.

The selected chains are illustrative product cards, not a full tactical audit. They show how the report can convert event-chain evidence into a story for media and a teaching object for academy use.

CHAIN CARD NO	CHAIN NAME	VALIDATED CHAIN SUBTYPE	EXAMPLE MATCH	TEAM NAME	MINUTE WINDOW	RISK PEAK	RISK DELTA PEAK	OUTCOME	ROBUSTNESS STATUS
1	Transition Pressure Chain	counter_attack_shot_chain	South Korea vs Germany	South Korea	95-97	0.893	0.5825	goal	promising
2	Corner Pressure Chain	corner_shot_chain	France vs Belgium	France	50-51	0.8853	0.7353	goal	robust
3	Free-Kick Second-Phase Chain	free_kick_shot_chain	France vs Croatia	Croatia	42-42	0.7953	0.7553	shot_without_goal	robust
4	Duel-to-Shot Chain	duel_to_shot_chain	Belgium vs England	Belgium	81-82	0.75	0.71	goal	robust
5	Open-Play Goal Chain	open_play_goal_chain	Belgium vs England	Belgium	3-4	0.75	0.71	goal	promising

Transition Pressure Chain

transition pressure | South Korea vs Germany | team: South Korea | minute 95-97

Chain card 1

Transition Pressure Chain

transition pressure | South Korea vs Germany | team: South Korea | min 95-97

Risk peak

0.893

Delta

0.5825

Event sequence

Duel -> Carry -> Pressure -> Pass -> Ball Receipt* -> Shot -> Goal Keeper -> Pass -> Ball Receipt*

Media interpretation

Danger accelerates after a regained or unstable possession phase and reaches a shot before the defence fully resets.

Academy interpretation

Train first reactions after loss or regain: immediate pressure, covering positions and recovery runs before the shot window opens.

Synathra.Sport Media & Academy Report v0.1

Risk peak

0.893

Risk delta

0.5825

Outcome

goal

Media interpretation. Danger accelerates after a regained or unstable possession phase and reaches a shot before the defence fully resets.

Academy interpretation. Train first reactions after loss or regain: immediate pressure, covering positions and recovery runs before the shot window opens.

Corner Pressure Chain

set-piece pressure | France vs Belgium | team: France | minute 50-51

Chain card 2

Corner Pressure Chain

set-piece pressure | France vs Belgium | team: France | min 50-51

Risk peak
0.8853

Delta
0.7353

Event sequence

Block -> Goal Keeper -> Pass -> Ball Receipt* -> Duel -> Shot -> Goal Keeper -> Pass -> Ball Receipt*

Media interpretation

The shot is the visible endpoint; the risk is formed through a sequence of corner pressure, second ball and box re-entry actions.

Academy interpretation

Use the chain as a video-review checklist for set-piece coverage, second-ball control and recovery after clearance.

Synathra.Sport Media & Academy Report v0.1

Risk peak
0.8853

Risk delta
0.7353

Outcome
goal

Media interpretation. The shot is the visible endpoint; the risk is formed through a sequence of corner pressure, second ball and box re-entry actions.

Academy interpretation. Use the chain as a video-review checklist for set-piece coverage, second-ball control and recovery after clearance.

Free-Kick Second-Phase Chain

set-piece pressure | France vs Croatia | team: Croatia | minute 42-42

Chain card 3

Free-Kick Second-Phase Chain

set-piece pressure | France vs Croatia | team: Croatia | min 42-42

Risk peak
0.7953

Delta
0.7553

Event sequence

Foul Committed -> Foul Won -> Pass -> Ball Receipt* -> Duel -> Shot -> Block -> Goal Keeper -> Clearance

Media interpretation

The free kick is not only a single delivery event; the dangerous shot may arrive after continuation and recycling.

Academy interpretation

Coach the post-delivery phase: spacing after first contact, ball-side pressure and defensive line recovery.

Synathra.Sport Media & Academy Report v0.1

Risk peak
0.7953

Risk delta
0.7553

Outcome
shot_without_goal

Media interpretation. The free kick is not only a single delivery event; the dangerous shot may arrive after continuation and recycling.

Academy interpretation. Coach the post-delivery phase: spacing after first contact, ball-side pressure and defensive line recovery.

Duel-to-Shot Chain

open-play control loss | Belgium vs England | team: Belgium | minute 81-82

Chain card 4

Duel-to-Shot Chain

open-play control loss | Belgium vs England | team: Belgium | min 81-82

Risk peak

0.75

Delta

0.71

Event sequence

Carry -> Pass -> Pressure -> Ball Receipt* -> Carry -> Shot -> Goal Keeper -> Camera On -> Pass

Media interpretation

A duel or pressure event can mark the control-loss point that opens the path to a shot.

Academy interpretation

Teach players to identify duel outcomes as state transitions: if the duel is lost, cover and compactness must change immediately.

Synathra.Sport Media & Academy Report v0.1

Risk peak

0.75

Risk delta

0.71

Outcome

goal

Media interpretation. A duel or pressure event can mark the control-loss point that opens the path to a shot.

Academy interpretation. Teach players to identify duel outcomes as state transitions: if the duel is lost, cover and compactness must change immediately.

Open-Play Goal Chain

open-play progression | Belgium vs England | team: Belgium | minute 3-4

Chain card 5

Open-Play Goal Chain

open-play progression | Belgium vs England | team: Belgium | min 3-4

Risk peak

0.75

Delta

0.71

Event sequence

Pass -> Ball Receipt* -> Carry -> Pass -> Ball Receipt* -> Shot -> Goal Keeper -> Camera On -> Pass

Media interpretation

A regular-play sequence can build risk before the goal becomes visible as a shot.

Academy interpretation

Use the chain to teach decision quality in progression: pass timing, carry choice and shot preparation.

Synathra.Sport Media & Academy Report v0.1

Risk peak

0.75

Risk delta

0.71

Outcome

goal

Media interpretation. A regular-play sequence can build risk before the goal becomes visible as a shot.

Academy interpretation. Use the chain to teach decision quality in progression: pass timing, carry choice and shot preparation.

MEDIA INTERPRETATION

What the report gives to media.

Risk Chain of the Match

A compact explanation of the sequence that carried risk before the visible shot or goal.

Danger Started Earlier

A narrative device: the danger did not start with the shot; it started several events earlier.

Turning Point Chain

A short evidence block for match stories, articles, newsletters, Substack posts, and video scripts.

ACADEMY INTERPRETATION

What the report gives to coach education.

Decision-chain lessons

Each card isolates the decision window before danger becomes visible.

Video-review checklist

Use the chain as a search pattern for video: loss, recovery, second ball, pressure, entry, shot.

Prevention before danger

The training goal is not only to defend the shot; it is to prevent chain activation earlier.

PILOT OFFER

Synathra.Sport Public-to-Private Pilot.

A first pilot can cover 5-10 matches, 3-5 recurring chain types, HTML/PDF reporting, visual cards, a technical appendix, and a feedback call. The media version emphasizes story and explanation; the academy version emphasizes coach education and video-review prompts; the club version should use team-specific or properly licensed data.

What this report does not claim

- Not a live betting model.
- Not a final-score predictor.
- Not a replacement for xG or tracking platforms.
- Not a universal football model.
- Not a tactical prescription without expert review.
